I've been building things with code for a long time: Arduino and Raspberry Pi projects at university, then scripts to speed up my Premiere Pro workflow. A few years ago I took an online Python course just to test whether I actually wanted to do this professionally, and fell in love with coding enough that I did Le Wagon's in-person AI Software Development bootcamp in London. I've worked mostly with Ruby on Rails, JavaScript and Python, but I lean towards the front end. It's the part that overlaps most with my background in videography, motion graphics and design, and where I get the most satisfaction taking something complicated and making it clear. I'm currently learning React properly by contributing to a collaborative project, and I like the idea of doing the same thing with something as dense as Tussell's data, making it something people can actually explore and understand.

Experience

Software Development Bootcamp

Le Wagon (In-Person)

Jan 2026 – March 2026

400 hours of intensive, hands-on coding in an agile environment.

Stack: Ruby on Rails, JavaScript, PostgreSQL, HTML/CSS, Git.

AI Integration: Implemented LLMs and RAG systems using OpenAI web applications.

Architecture: Developed full-stack MVPs from scratch using MVC patterns, OOP, and Test-Driven Development.

Collaboration: Managed version control and deployments with GitHub and Heroku in an Agile/Scrum environment.

Technical Creative & Videographer

Freelance / wrkshp studio / h10 Agency

2018 – present

Variety: Mostly working in fast paced corporate event video space but I have experience in music videos, TV travel shows, art projects and much more.

Technical: Working with high end camera systems to capture footage in live environments. Having to think on my feet to be creative and technically proficient at the same time.

Client Delivery: Listen to client feedback on video edits and motion graphics and translating that to actual technical changes in the project.

VFX & Logic: Engineered visual effects and title designs for NDR, utilizing logic-based workflows to solve complex visual problems. Using simple scripting to speed up edit times.

Skills

ruby

javascript

python

html

css

sql

rails

heroku

github

postgresql

adobe suite

figma

blender

Projects

Waxxee - Personalised music discovery platform to recreate the experience of 'crate digging'. AI-driven search to help users find niche records based on vague descriptions. Deployed on Heroku with user authentication.

Start-up CoPilot - AI assisted business plan tracker. Generate business plans, market info and viability forecasts. Scan a drawing and based on business plan create a logo based on the drawing.

Bard - Chrome extension that programmatically detects, hides, and mutes advertisements and replaces with a poem.

Education

LeWagon - AI Software Development 2026

BA (Hons) Filmmaking (First)
Kingston University, 2013-2016

Other certificates:

Mimo Python Dev, Drone license, Full UK drivers license, PAT testing cert.
